

8. PHYSICS 141 LAB FINAL

The lab final will be a combination of multiple-choice and short-answer questions related to the experiments you did in the lab this semester. Questions will deal with experimental apparatus and techniques, interpretation of graphical representations of data, error analysis, and related topics. You will work alone on the final, but may use your lab binder, including graded pre-labs and reports, and a calculator as authorized aid. To prepare for the final, you will probably find it useful to review your binder and the list of experiments you performed.
